

Secure File Sync & Share from data

The Search for Easy, Secure File Sharing

In today's distributed enterprise the need to share information has gone beyond what traditional systems can provide. Enterprise users have become used to the ease of cloud file sync and share (FSS) consumer-grade applications such as Dropbox, and are looking for a simple, easy way to share files in their business environment.

CTO's and compliance managers, on the other hand, are concerned with controlling where data is sent, how it is shared and how secure it is both in-transit and when stored in the cloud. Recent breaches into public consumer cloud services have proven those concerns to be justified, and the only solution is creating a secure, easy-to-use alternative.

The Secure, Cloud File Sync & Share Solution

Oncore IT, through its OnData solution powered by CTERA provides an enterprise-grade alternative to consumer cloud applications, utilizing private cloud infrastructure and providing end-to-end security. Managed via a secure portal, the solution allows business users to set up file share and sync services for their users based on a variety of object storage platforms. The OnData file sync & share solution can be used as:

- FTP alternative and large file transfer
- Secure file access for BYOD users
- Shared team workspaces
- File syndication (one-to-many or few-to-many)

The Right Response: A Business Alternative

Where It Has to Be Different from Consumer Applications

Consumer 

- ❑ You have no idea where your data is stored
- ❑ Global encryption
- ❑ Not WAN-Optimized
- ❑ No control over shares
- ❑ No Guaranteed SLA
- ❑ No accountability

Business 

- ❑ You know exactly where your data is stored
- ❑ Private key encryption
- ❑ WAN-Optimized (de-dup)
- ❑ Auditing, remote wipe
- ❑ "Best effort"
- ❑ Someone you can call

Integration with Active Directory LDAP

Use your existing Active Directory or LDAP directory services for identity management and user authentication, avoiding duplicate directory services, ensuring rapid deployment and maintaining role-based access privileges. AD groups can also be leveraged to determine user privileges for setting up shared project folders.

Folder Synchronization

Access to the cloud is not always guaranteed and at times may be slow. With folder sync, user files are automatically synchronized between their PC or laptop and their cloud folder, keeping files accessible and maintaining version control.

Project Team Collaboration

The file sync & share solution from OnData allows users to set up joint cloud storage workspaces in the form of 'cloud folders' for collaborating with colleagues, including the following features:

- ❑ Define read/write privileges and time-limited access
- ❑ Bi-directional synchronization of folders on their PCs with each other
- ❑ One-way synchronization for file syndication
- ❑ Conflict resolution in case of divergent file versions
- ❑ Ad-hoc sharing using time-limited invitation URLs
- ❑ Role-based privileges for allowing users to create shared project folders

Multi-Platform End-Point

The OnData file sync & share solution includes software agents for Windows, Mac and Linux, and mobile apps for iOS and Android devices.

More about Cloud Services

The combination of rapidly evolving technology and economics has forced nearly every organization to rethink its approach to IT and the function it performs. Where once you were asked to do a lot with a little, you're now forced to do even more with even less. Meeting this challenge requires innovative ways to respond to changing business needs, improve flexibility, speed technology innovation, and provide higher business value.

Oncore IT delivers the resources and capabilities required to assess, design, build and manage an agile, flexible IT environment.

Affordable, scalable virtual and cloud-based services that can be simply defined by availability or number of users

The benefits of cloud are well documented: high availability, high levels of resilience, agility, flexibility to respond quickly to changing workloads or new initiatives and cost efficiency bringing consistent enterprise-class capability to small and medium-sized organisations.

Oncore understands that every 'journey to the cloud' is unique, depending on core business objectives, overall readiness to adopt a cloud delivery model and more obviously, infrastructure, applications and processes. With that in mind, we have developed a portfolio of private cloud services that are endlessly customisable with enough flex to accommodate your specific evolving requirements.

Safe hands, fresh outlook

Oncore IT offers customers a range of hybrid or virtual private cloud services and packaged solutions built on our platform, delivering the ultimate blend of

standardised public cloud provisioning with private hosted customisation and security.

Our cloud services include fully managed Infrastructure as a Service and Software as a Service, giving customers access to new levels of capacity and compute that drive operational efficiency and increase agility.

Our packaged cloud solutions represent the optimal combination of network, compute and service elements to resolve specific challenges typically faced by our customers. These include network performance, remote working, application diversity, office connectivity and secure, fast cloud services for business.

Why Oncore IT ?

Oncore IT has been delivering flexible, on-demand services to our managed service, colocation and network customers for years - to us, 'the cloud' is an elegant, innovative delivery mechanism. Our customers select what they need as they need it, only paying for what they use. It's a model brilliant in its simplicity, allowing organisations to revolutionise provisioning with access to affordable, market-leading cloud services that make the most of their IT investment.

Working for many years in close partnership with companies that rely on IT for business value, we deliver services exactly aligned with business strategy, enabling change and innovation. Whether you deploy cloud services strategically or tactically on a temporary basis for test or dev purposes, Adapt will work collaboratively with you to develop a roadmap and vision for the evolution and optimisation of your estate.

In addition to our specialist technical expertise and unparalleled service capability, we pride ourselves on our practical assistance and straight talking advice - we tell it how it is, jargon free.
